

BIFENTURE® LFC LIQUID-FERTILIZER COMPATIBLE FOR PROTECTION THAT BEGINS AT PLANTING.

BIFENTURE® LFC insecticide (liquid fertilizer compatible) protects corn yields by adding an extra layer of protection at the critical planting stage. A contact insecticide, BIFENTURE LFC effectively stops the most damaging insects, including Bt-resistant species, before they can damage seeds and early root development. BIFENTURE LFC can be easily mixed with pop-up or starter fertilizers, saving time and money.

ACTIVE INGREDIENT

Bifenthrin

FEATURES & BENEFITS

- Effective tool against rootworms, wireworms and other major pests
- Enhances protection from damage caused by Bt-resistant insects
- No closed system or special handling requirements
- Compatible with pop-up or starter fertilizers

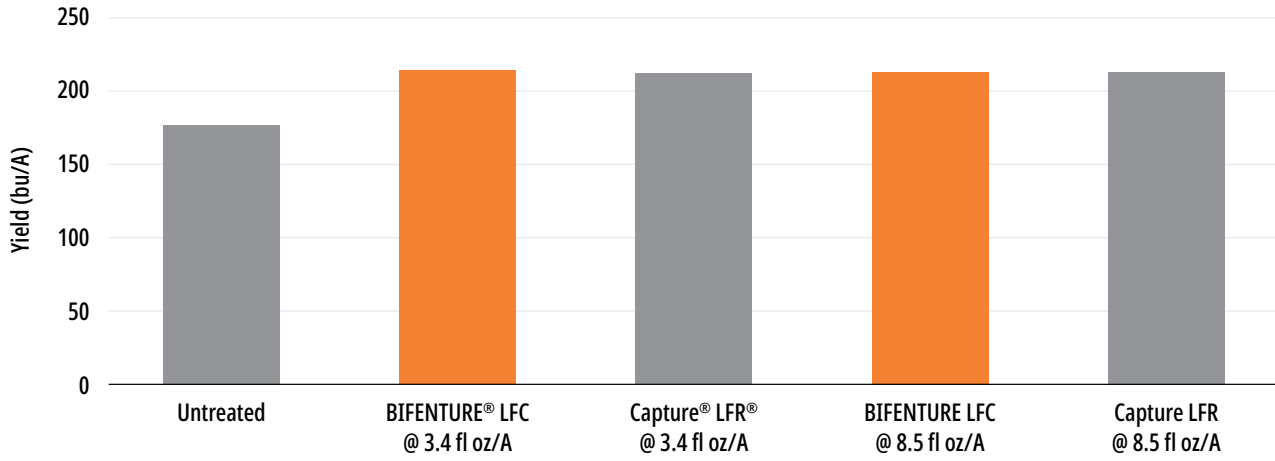

KEY PESTS CONTROLLED

Armyworm
Corn rootworm
Cutworm
Grubs
Root aphid
Seed maggot
Stalk borer
Wireworm

TIMING AND USAGE RATES

General recommended use rate is 3.4–8.5 fl oz of BIFENTURE LFC per acre. Please see label for specific use rates by insect, crop and application timing.
