

UPL CEREALS PORTFOLIO

Innovative solutions that deliver maximum performance and value

At UPL, our portfolio of innovative solutions for the cereals market is growing. Our goal is to always provide broader choice and greater value, with advanced products and customized solutions to meet the needs of each grower. We invite you to review our expanded portfolio of proven fungicides, insecticides, herbicides and seed treatments that deliver exceptional performance and value.

AUDIT® 1:1

AUDIT 1:1 Herbicide is the dependable first choice for consistent, post-emergent control of tough broadleaf weeds like Canada thistle, pigweed, lambsquarters, mustards and others. AUDIT 1:1 also provides flexible crop rotation and enhanced grass performance with Group 2 herbicides like Everest® 3.0.

AUDIT® 4:1

AUDIT 4:1 Herbicide provides excellent post-emergent control of key broadleaf weeds such as wild buckwheat, pigweed, lambsquarters and mustards. AUDIT 4:1 also offers excellent crop rotation flexibility as well as optimal tank-mix flexibility.

EVEREST® 3.0

EVEREST 3.0 Herbicide is an advanced flucarbazone-sodium formulation with new carrier technology for wave after wave of grassy weed control with greater stability of the active ingredients for enhanced performance, longer shelf life and unsurpassed ease of use. EVEREST 3.0 provides relentless control of wild oats and broad-spectrum control of hard-to-kill grass and broadleaf weeds such as green and yellow foxtail, bromes and other hard-to-kill weeds.

PRE-PARE®

PRE-PARE Burndown Herbicide protects spring wheat from yield-robbing early weed competition by enhancing glyphosate's burndown and providing extended, residual control of grassy weeds like brome, foxtail barley, wild oats, green foxtail and Roundup Ready® canola volunteers. In winter wheat, PRE-PARE helps control existing and early emerging bromes for up to 21 days, in addition to other grass and broadleaf weeds that can rob moisture and nutrients from young wheat.

SUPREMACY®

SUPREMACY Herbicide, with multiple modes of action, controls more than 70 broadleaf weeds, including ALS-resistant/glyphosate-resistant kochia, wild buckwheat, Canada thistle, Russian thistle, lambsquarters, mustards, cleavers/bedstraw and pigweed in all wheat types (including durum), barley, oat and triticale.

EVITO®

EVITO Fungicide is a highly systemic strobilurin that provides fast, reliable and long-lasting protection. EVITO has superior leaf penetration and moves rapidly through the xylem. Even product that falls onto the soil will be taken up through the root system. And with residual soil activity, rain or irrigation will give it a second boost for even longer-lasting protection.

FORTIX®

FORTIX Fungicide is a highly systemic, fast-acting strobilurin combined with a highly systemic triazole, so it moves rapidly into and through the plant, making it particularly effective when applied at the flag-leaf stage, a critical time for kernel development. FORTIX can also be applied at herbicide timing, with higher rates providing more consistent performance.

ZOLERA® FX

ZOLERA FX Fungicide combines two powerful active ingredients to create a super strong and highly effective fungicide for wheat. A fast-acting, highly systemic strobilurin is combined with a highly systemic triazole for a fungicide with multiple modes of action that provides both early season disease control and consistent plant health benefits.

LAMBDA-CY®

LAMBDA-CY Insecticide is a third-generation pyrethroid, highly versatile against a wide spectrum of insects. This trusted formulation provides quick knockdown and excellent residual control. And with relatively low application rates, it's one of the more cost-effective options on the market today.

RANCONA® V RTU

RANCONA V RTU Seed Treatment ensures you're maximizing your seed treatment investment and maximizing your yield potential. Three powerful fungicides provide both contact and systemic activity against a broad spectrum of yield-robbing wheat diseases. With the superior coverage and adhesion of RANCONA flowable application technology, you have a safe seed treatment for cereals that delivers more consistent protection under a wider range of conditions.
